

Introduction to Vernal Ponds with Cape Ann Vernal Pond Team

Monday, April 3rd 6:30pm
Presentation & Live Animal Exhibit

Ever wonder what is making all those "BLEEP-BLEEP-BLEEPS" and "CHIRP-CHIRPS" as you walk by the woods on a warm, wet, spring day or night?
Is it birds? Bugs? Frogs?

Join us for a free, **family friendly** event to learn about vernal ponds and the wildlife that depend on them. Vernal ponds are temporary, fishless wetlands that fill with rainfall and snow melt. They become the seasonal breeding and feeding grounds for many intriguing amphibians and insects, as well as the reptiles, birds, and mammals that depend on them for food. And they can be found right here in Swampscott!

RICK ROTH, Founder & Executive Director
CAVPT, and lifelong wildlife protector.
"We have one earth, save it"
